

## **AMENDMENTS TO THE CLAIMS**

*This listing of claims replaces all prior versions of listing of claims, and listing of claims in the application.*

### **Listing of Claims**

1. (Currently Amended) A method of reducing cutaneous facial flushing caused by menopause-associated hot flashes in a human in need thereof, the method comprising topically administering to the human a composition comprising at least one selective  $\alpha_2$  adrenergic receptor agonist admixed with a dermatologically acceptable carrier, in an amount effective to reduce the cutaneous facial flushing, wherein the selective  $\alpha_2$  adrenergic receptor agonist is at least two-fold to ~~fifty~~twenty-fold more selective for the  $\alpha_2$  adrenergic receptor as compared to clonidine.

2. (Previously Presented) The method of claim 1, wherein the composition contains at least one (2-imidazolin-2-ylamino) quinoxaline derivative or an acidic salt thereof.

3-10. (Cancelled)

11. (Original) The method of claim 2, wherein the composition further comprises an agent, or combination of agents, selected from the group consisting of antibacterial agents, anthelmintic agents, antioxidant agents, steroidal anti-inflammatory agents, non-steroidal anti-inflammatory agents, antiangiogenic agents, and derivatives of retinoic acid.

12. (Original) The method of claim 1, wherein the composition further comprises an agent, or combination of agents, selected from the group consisting of antibacterial agents, anthelmintic agents, antioxidant agents, steroidal anti-inflammatory agents, non-steroidal anti-inflammatory agents, antiangiogenic agents, and derivatives of retinoic acid.

Applicant: Warren J. Scherer  
Application Serial No.: 10/626,037  
Filing Date: July 23, 2003  
Docket No.: 512-160

---

13-33. (Cancelled)

34. (Previously Presented) The method of claim 1, wherein the selective  $\alpha_2$  adrenergic receptor agonist is at least seven-fold to twelve-fold more selective for the  $\alpha_2$  adrenergic receptor as compared to clonidine.

35. (Previously Presented) The method of claim 1, wherein the composition is administered to the skin of the human.

36. (Previously Presented) A method of treating facial flushing associated with menopause-associated hot flashes in a human in need thereof, the method comprising topically administering a composition comprising an effective amount of brimonidine tartrate and a dermatologically acceptable carrier to the site of the facial flushing on the human.
